

## CONSTRUCTION OF THE "VERIGE" BRIDGE OVER THE BAY OF KOTOR

The "Verige" Bridge is planned at the site of Cape St. Nedjelja/Cape Opatovo and is an integral part of the highway along the Montenegrin Coast. The total length of the bridge amounts to 981 m, of which the span between the main supports is 450 m. The main bridge structure will be built as a "Cable Stayed System". The length of the access roads to the bridge from both sides amounts to totally 1800 m. A 200 m long viaduct is planned on the access road towards Tivat.

### MARKET DEMAND

The construction of the "Verige" Bridge will make the road from Tivat to Herceg Novi considerably shorter, improve the traffic conditions and the complete tourist offer of Montenegro. The bridge is extremely important, as it is an integral part of the highway along the Montenegrin Coast from the border with Croatia to the border with Albania.

### ORGANIZATION PROFILE
